

FinLogon Enterprise Edition(EE) for MS Windows Server

FinLogon Enterprise Edition is an authentication software running on MS Windows Server using Futronic proprietary fingerprint/finger-vein recognition technology for total logon management and password control.

It consists of server and client component. Installation is very easy and can be set up and running in 2-3 hours. It has the same user interface as **FinLogon Personal Edition**. For enterprises that have been using Finlogon Personal Edition, it is very easy to upgrade to Finlogon Enterprise Edition

It works with Futronic USB Fingerprint/Finger-vein Scanner and integrates seamlessly with MS Windows Server Active Directory. All domain users can logon Active Directory with a finger touch at any client workstation. NO more passwords. Make the life of both ordinary computer users and system administrators simpler and easier.

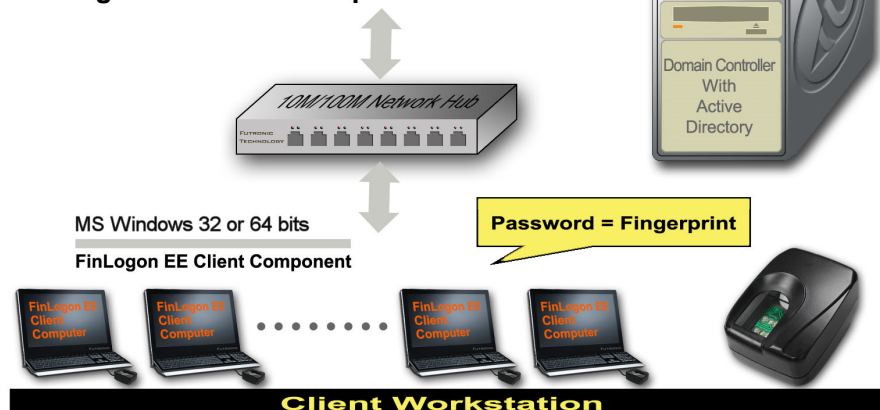

FinLogon EE users can also make use of two free software tools from Futronic, One Touch Password Filler and Fingerprint File Encryption, which come in the **FinLogon Add-on Pack**, to have a more secure and convenient computing environment.

Futronic charges per user license fee for Finlogon Enterprise Edition. That is, enterprises pay according to the exact number of users that are using this software. No setup charge, bundle and additional fee. So this is a very cost effective solution.

FinLogon Enterprise Edition

MS Windows Server with Active Directory

FinLogon EE Server Component

Features

- Server component works in MS Windows Server Active Directory, 32 bit and 64 bit.
- Client component works in MS Windows XP/Vista/7/8/10/11 professional, 32 bit and 64 bit.
- Logon Active Directory by a finger touch. **NO MORE PASSWORD**
- Prevent unauthorized access to Server/Domain Controller
- Fingerprint recognition accuracy: FAR-10⁻⁶, FRR-10⁻²
- Support Futronic USB Fingerprint scanners, FS80, FS82, FS88. Finger-vein scanner VS80.
- Use Active Directory Schema Extension technology
- All fingerprint data are stored in Active Directory with 256bit AES encryption
- Fingerprint data can be imported and exported.
- Auto-detect password change in Active Directory
- Support fingerprint data auto-replica in multi domain controllers environment
- Fingerprint data transmission by TCP/IP
- All data transfer is protected by Diffie-Hellman key exchange algorithm.
- 4 authentication options:
 - Either fingerprint/finger-vein or password
 - Fingerprint/Finger-vein only
 - Password only
 - Both fingerprint/finger-vein and password
- Support return from Standby, Hibernate, Windows Lock and Screen Saver
- Support Live Finger Detection(LFD) when use together with Futronic USB Fingerprint Scanners FS80, FS82 and FS88.

Benefit for Users

- No need to memorize password(s) to logon computer/server/domain because their fingers are the passwords which will not be forgotten or lost
- Eliminate the headache of frequent changing password because such security policy is no longer necessary

Benefit for system administrator

- No "user lockup" because of entering wrong password
- No more request for "reset password" from users
- Better user identity management: know exactly who is logging on

Benefit for enterprise

- Improve overall system and data security because of the elimination of password-based authentication system
- Better overall workforce productivity
- Reduce computer network management cost
